EDUCATION

University American College Skopje (UACS)

BSc in Computer Science, School of Computer Science and Information Technology

Skopje, North Macedonia

Expected 2027

TECHNICAL PROJECTS

Eclipse - League of Legends Match Analytics Platform

eclipse.martinjakovoski.dev | [GitHub](#)

- Built and deployed a full-stack analytics platform that pulls live match, ranked, and champion data from the Riot Games API into per-player performance summaries.
- Engineered a Node.js and Express backend that proxies and caches Riot API responses, keeping third-party rate limits away from the client and cutting repeat request latency.
- Developed a responsive React and Vite frontend with React Router, serving champion and item assets from the Data Dragon CDN to keep bundle size small.
- Integrated an AI layer that turns raw match statistics into natural-language performance insights and improvement suggestions.

GymAscend - Gamified Fitness Tracking Application

gymascend.martinjakovoski.dev | [GitHub](#)

- Designed and shipped a REST API in Java 17 and Spring Boot 3.2, using a layered controller, service, and repository architecture with Bean Validation on all inbound requests, and secured it with stateless Spring Security, JWT, and BCrypt authentication across all protected endpoints.
- Modeled workout, nutrition, user, and social domains across six JPA entities in PostgreSQL, persisted through Spring Data JPA and Hibernate, including a friend-request graph and leaderboard aggregation.
- Built a video-game-inspired ranking system scoring lifts against gender and weight-class strength benchmarks plus weekly training consistency, alongside BMI and macronutrient calculators integrated with the Open Food Facts API, to drive user retention.
- Developed a responsive React 19, Vite, and Tailwind CSS front end, containerized the stack with Docker Compose, and deployed to Render and Vercel with environment-driven configuration and Git-based continuous deployment.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, C#, C++, Python, SQL

Frontend: React, Next.js, Vite, Tailwind CSS, React Router, HTML, CSS

Backend: Node.js, Express, Spring Boot, Spring Security, .NET (familiar)

Data & Tools: PostgreSQL, Hibernate, Spring Data JPA, REST APIs, JWT, Docker, Maven, Git, Vercel, Render

WORK EXPERIENCE

Avenue & Ocean Place

New Jersey, USA

Server (concurrent roles)

2024 - 2025

- Held server positions at two coastal restaurants concurrently, coordinating overlapping schedules without a missed shift.
- Managed high-volume dinner service, prioritizing competing tables and resolving guest issues under sustained time pressure.

Holland America Princess - Denali, Alaska

Alaska, USA

Server and Host

2023 - 2024

- Served guests across two seasons at a high-traffic tourism destination within an international team.
- Handled host duties including seating flow and waitlist management at peak periods, balancing turnover against wait times.

Taskforce BPO (client: Niagara Bottling)

Skopje, North Macedonia

Logistics Administrator

July 2022 - August 2023

- Coordinated inbound freight for a US bottling client from an outsourced operations center, dispatching 5 to 6 trucks per day to assigned plant loading windows.
- Worked with dispatchers and plant staff across time zones to sequence arrivals, keeping loading bays supplied and limiting driver wait time.
- Maintained shipment records in the client tracking system, giving stakeholders a real-time view of fleet position.
